Biweekly Report Week 6

### **1. Brief summary of the activities in the last two weeks**

In the last two weeks, I finished up testing on the iOS mobile application and refined the project plan. Then I deployed the iOS application on the app store. For the Android application, I started wire framing the design of the app and planning out the infrastructure. I also worked with the web development team to enable push notifications on the mobile apps, it required a lot more server side coding than I first thought.

### **2. Status-summary of the extra credit homework(s) that are due week#10**

I have finished the first extra credit homework and research the competitors to our product. However, I have not started the second project.

### **3. Any exceptions that could affect the demo/presentation<sup>1</sup>**

No exceptions so far, I think the Android app will be done in time to demo.

### **4. Any items more-remotely related to the project that need to be discussed**

We have started beta testing our project in a few companies such as Kingland, Land O Lakes, and one Hy-Vee store.
